Please contact the Washington County office of Texas A&M AgriLife Extension Service at (979) 277-6212 or visit our website at washington.agrilife.org for more information.

Broccoli: Green Magic

Light: Full sun, Head size: 6 to 8 inches, Matures: 55 to 65 days, Plant Spacing: 18 to 24 inches apart, Plant Size: 22 to 24 inches tall. Plant your broccoli where it will get least 6 hours of sun daily and has fertile, well-drained, moist soil with plenty of organic matter. Mulch will help keep the ground cool and moist.

Bok Choy

Light: Full sun to partial shade, , Matures: 45 - 50 days, Plant spacing: 6 to 10 inches Plant size: 1 to 2 feet tall, 12 inches wide. Bok choy (aka pak choi) is a cabbage-like veggie that's been selected more for its thick, crunchy, white leaf ribs than its leaves (though those are quite tasty too). It's high in calcium and iron and is delicious eaten raw in salads, sautéed, stir-fried, or steamed.

Brussel Sprouts

Light: Full sun, Sprout size: 2 inches, Matures: 85 to 90 days, Plant spacing: 18 to 24 inches apart, Plant size: 2 feet tall, 18 to 24 inches wide. Brussels sprouts are a favorite cool season crop. The green sprouts, or 'mini-cabbages,' grow along the thick stem. Plants get about two feet tall. High in protein. An excellent source of vitamin C. Freeze well for storage.

Cabbage: Early Jersey Wakefield

Light: Full sun, Head size: 2 to 4 pounds, Matures: 60 to 75 days, Plant spacing: 24 inches apart, Plant size: 12 to 18 inches tall, 18 to 24 inches wide. Heirloom. This American cabbage is a favorite for early harvest, forming a conical, pointed, dark green head with a smooth, sweet flavor. The head is slow to split and slow to bolt. Holds in the garden for 2 to 3 weeks after maturity. Some gardeners consider this the best tasting of all cabbages.

Cabbage: Stonehead

Light: Full sun, Head size: 4 to 6 pounds, Matures: 65 to 75 days, Plant spacing: 24 inches apart, Plant size: 12 to 20 inches tall, 18 to 24 inches wide. Heirloom. All American Selection winner that finishes quickly, hold well, and stands up to splitting, yellows, and black rot.

Cabbage: Early Flat Dutch

Light: Full sun, Head size: 8 pounds, Matures: 80 days, Plant spacing: 24 inches apart, Plant size: 18 inches tall, 24 inches wide. Early Flat Dutch is named for the large, firm, nearly flat heads that mature a little earlier than the Late Flat Dutch variety. It's a good one for spring or fall. Excellent source of vitamin C. One of the best cabbage varieties for storage.

Cauliflower: Snow Crown

Light: Full sun, Head size: 6-8 inches, Matures: 75 days, Plant spacing: 18 -24 inches apart, Plant size: 18 inches wide, 12 to 18 inches tall. Select a site with at least 6 hours of full sun. Inner leaves wrap to protect the deep, white curds. Produces heavy yields. Try raw with dips or broken into salads. More resistant to cold than many cauliflower varieties. Rich in vitamin C.

Collard Greens

Light: Full sun to part shade, Matures 45+ days, Plant spacing 18 to 24 inches apart, Plant size: 24 inches tall. This open-pollinated variety produces broad, waxy leaves that vary from green to blue-green. Many plants will form loose, leafy heads late in the growing season. An old Southern favorite with great flavor and nutrition. Grows best in full sun, but will tolerate partial shade and even appreciates it in spring in hot climates

Kale

Light: Full sun to part shade, Leaf size: 12 to 24 inches, Matures: 45+ days, Plant spacing: 12 inches apart, Plant size: 1 foot wide, 1 to 2 feet tall. Vigorous producer, with leaves growing lushly on compact plants. Cut outer leaves so that center can continue growing.

Lettuce: Green Leaf

Light: Sun to part shade, Leaf size: 8 to 12 inches long, Matures: 21+ days after planting, Plant spacing: 10 to 15 inches apart, Plant size: 12 inches tall. Hybrid. This lettuce looks as good as it tastes, producing large, loose heads of bright green, curly leaves with a buttery flavor. Plants resist bolting and are easy to grow. Perfect for containers!

Lettuce: Red Leaf

Light: Full sun to part shade, Head size: 8 to 12 inches, Matures: 21 days for leaves, 45 days for head, Plant spacing 10 to 15 inches apart. This beautiful lettuce offers a large, open "head" of loose leaves that deepens in color as it matures. It is fast growing, heat tolerant, and slow to bolt. Very high in nutrition. Grows best in full sun, but will tolerate partial shade and even appreciates it in spring in hot climates. The red color is best in full sun and cool weather.

Lettuce: Romaine

Light: Full sun to part shade, Matures: 70 to 80 days to harvest, Plant spacing 12 inches apart.

Romaine type lettuces grow as a tall head with thick, ribbed leaves. They are regarded as one of the more nutritious types of lettuce, often containing vitamins A, B and C and an array of minerals.

Mustard Greens

Light: Full sun to part shade, Leaf size: 8 to 15 inches, Matures: 45 days, Plant spacing: 12 inches apart.

Very fast-growing, nutritious, leafy greens for cool-season growing. Always taste sweeter when nipped by frost. Can cook Southern style or even cut up raw for a nippy, peppery taste in salads. A whole leaf will add spark to a sandwich. Grows best in full sun, but will tolerate partial shade and even appreciates it in spring in hot climates.

Spinach

Light: Full sun to part shade, Matures: 40 days, Plant spacing: 12 inches apart, Plant size: 8 to 10 inches tall and wide

This variety of dark green spinach has been a standout in many regions, including the North. It is slow to bolt and suitable for spring, summer, and fall planting. The full, upright plants produce high yields of large, triangular leaves that are rich in the phytonutrient lutein. Both frost and heat tolerant.

Swiss Chard

Light: Full sun to part shade, Leaf size: 18 to 24 inches, Matures: 45+ days, Plant spacing: 12 to 18 inches apart

Large leaves with a prominent, flat wide mid-rib grow in an upright rosette that is beautiful in a bed or container. Grows best in full sun, but will tolerate partial shade and even appreciates it in spring in hot climates. Highly nutritious, the leaves taste a lot like spinach, but this plant is a member of the beet family. Frost tolerant. Harvested chard freezes well.
